DETAILED ACTION

Claim Objections

1. Claims 1-3 are objected to because of the following informalities:
2. Claim 1, line 11, " so as to project" should be changed to - - so as to project from the opening section of the tube - -.

Claim 2, line 2, "the base" has no antecedent basis.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Fukushima et al. (U. S. Patent 5,681,187).

Regarding claim 1, Fukushima, (see figures 1-5) discloses a press fitting type spring connector comprising a tube 14 having an opening section provided at one end and a space inside; a contact pin 12 stored inside the tube capable of sliding having a tip 12a projecting from the opening section of the tube and with a contact member mounting section provided on outer surface, a contact member 15 mounted on the contact member mounting section of the contact pin and having a section contacting the contacting pin and a section contacting the inner surface of the tube and a coil spring

13, stored inside the tube for urging the contact pin tip so as to project, the contact pin is provided in an open section of the tube (base).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukushima in view of Bernardini (U. S. Patent 5,921,823).

Regarding claims 2 and 3, Fukushima discloses the claimed invention except for the contact pin has a space inside and a coil spring inside the pin. Bernardini (figure 4) discloses the contact pin having a space inside with the coil spring. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Fukushima to provide the contact pin with space inside as taught by Bernardini so as to hold the spring in the position.
